1.0 INTRODUCTION

INTERA Incorporated (INTERA) has prepared this Abandoned Uranium Mine (AUM) Site Assessment Report for the Mining and Minerals Division (MMD) of the New Mexico Energy, Minerals and Natural Resources Department (EMNRD) in compliance with the Professional Service Agreement dated November 2, 2009. INTERA visited the Blackhawk, Bunney, Red Bluff Nos. 7, 8, and 10, and UDC No. 1 Site (AUM Site), MMD ID: NM0074 on April 7, 2010 and April 8, 2010.

1.1 PREVIOUSLY KNOWN INFORMATION ABOUT THE SITE

The Red Bluff Nos. 7, 8, and 10 claims were in production from 1952 through 1958 and produced 39,284 tons of ore. Red Bluff No. 10 claim was last registered in 1964 (Anderson, 1980). The Bunney and Black Hawk claims produced a total of 13,908 tons of ore from open pits up to 40 ft deep. These claims were mined in 1952, 1956, 1958-1963, and 1965-1967 (McLemore, 1983). However, the Black Hawk claim was renamed Tycoon 2 in 1976, then becoming the New Black Hawk in 1980 (Anderson, 1980). The UDC Nos. 1-5 claims produced 927 tons of ore from a pit 80 ft deep (McLemore, 1983). Anderson (1980) was unable to determine the location of UDC No. 5, but notes that only minor activity occurred on UDC Nos. 1-4 (Anderson, 1980).

Anderson (1980) visited the Black Hawk, Bunney, Red Bluff Nos. 7, 8, and 10, and UDC Nos. 1-4 claims in 1980. Note that Anderson (1980) also includes Gay Eagle claim with these sites, but the present report considers the Gay Eagle a separate AUM Site (see the NM0121 Gay Eagle report). Anderson (1980) found that the most common features on these claims are trenches, open cuts, and pits. However, five adits are reported on the Black Hawk and Bunney claims, and large waste piles are present throughout the Site. The largest cuts occur in the Red Bluff Nos. 7, 8, and 10 claims, exposing reef structures in the Todilto Formation limestone. Anderson (1980) does not describe the 80 ft deep pit in the UDC claims mentioned by McLemore (1983), and notes that very little prospecting has occurred in these claims (Anderson, 1980).

1.2 SITE LOCATION AND DIRECTIONS

The AUM Site is on private and federal (Bureau of Land Management) land. The Site is located in the southern half of Section 4, Township 12 North, Range 9 West, in Cibola County (formerly Valencia County), approximately 10 miles northeast of the town of Milan. The location of this site was provided to INTERA by MMD.

To access the AUM Site from Albuquerque, drive west on Interstate 40 for 83 miles. Take Exit 79 towards San Mateo and turn right. Continue straight until you reach U. S. 66, less than a quarter mile. Turn left on U.S. 66 and drive 0.2 miles, then turn right onto New Mexico 605. Continue northeast on New Mexico 605 for 7.4 miles, then turn right onto a dirt road, passing through a locked gate. Drive east along this road for approximately 2 miles, after which the road makes a slight bend to the south and then curves north and ascends a mesa. After reaching the top of the mesa, continue north for another 1.3 miles until you see a barbed wire fence running east-west. This fence marks the boundary between Section 4 and Section 9, Township 12 North,

Range 9 West. The AUM Site lies on both sides of the road for another half mile north of the fence.

Note that permission from two private landowners is required in order to access and view the AUM Site. The access route from New Mexico 605 to the mesa is owned by one landowner, and the Site is owned by a different landowner.

1.3 SITE GEOLOGY

The AUM Site lies within the Grants uranium region. The topography of this region is characterized by mesas of Triassic, Jurassic, and Cretaceous sediments separated by broad valleys. The Site area is part of the Chaco Slope, the southern part of the San Juan Basin. Strata in the Chaco Slope dip gently to the north (McLemore, 2002).

The AUM Site is located within the Jurassic-age Todilto Formation, a sequence of carbonates and evaporites. This formation likely represents a salt lake environment intermittently connected to the ocean. The Todilto Formation is underlain by the Entrada Formation and overlain by the Summerville Formation (Hilpert, 1963). The Todilto consists of two members, the upper Tonque Arroyo Member and the lower Luciano Mesa Member. The Tonque Arroyo Member consists of gypsum and is absent from the Site area. The Luciano Mesa Member consists of a thinly laminated, locally deformed lower layer and a massive, vuggy upper layer (Lucas and Anderson, 2000). Primary-type uranium minerals such as pitchblende are reported to occur in the Todilto Limestone as well as secondary minerals such as carnotite and tyuyamunite (McLaughlin, 1963). Radiation levels are highest in the Red Bluff No. 8 claim, where a measurement taken in a heavily fractured zone in the Todilto Formation limestone exceeded 5000 $\mu\text{R/hr}$ at 0 ft above ground. The area of highest gamma ray activity consists of a dark grey to black fracture fill surrounded by a halo of yellow secondary-type uranium minerals. Euhedral calcite is common in nearby exposed Todilto Formation limestone.

Sand dunes and other aeolian features are present at the AUM Site, especially in the UDC No. 1 claim.

1.4 SITE HYDROGEOLOGY

The surface runoff at the AUM Site discharges to San Mateo Creek, which drains into the Rio San Jose approximately 8 miles to the southwest. There is no nearby permanent surface water.

The AUM Site is located in the Bluewater Underground Water Basin. This basin falls between the San Juan Underground Water Basin to the north, the Middle Rio Grande Underground Water Basin to the south and east, and the Gallup Underground Water Basin to the west (Edwards and Kiely, 2004). Aquifers are found in alluvium near major drainages such as San Mateo Creek and throughout the Cretaceous, Jurassic, and Triassic strata in the region. Groundwater flows southward in alluvium and northeast in Mesozoic strata (Brod, 1979).

1.5 REGIONAL TOPOGRAPHY AND TERRAIN

The AUM Site is found on the Dos Lomas Quadrangle 7.5 minute United States Geological Survey topographic map at an elevation of approximately 7000-7100 feet above mean sea level

(see Figure 2). The AUM Site is located just west of La Jara Mesa, on a broad mesa capped by the Todilto Formation.

2.0 MINE FEATURES

The mine features described below are based on the features provided to INTERA by MMD in the GIS Data Dictionary (MMD, 2009). INTERA marked the locations of the AUM Site features using a Trimble Global Positioning System (GPS), and entered details about the features into the GPS using the MMD data dictionary. Nine adits, three open cuts, one area with mining equipment, three barbed wire fences, one vent hole, eighteen piles, twenty pits and two structures were found onsite. Please see the Photo Log in Appendix A for photos of the AUM Site features, Table 1 for a list of the AUM Site features, and Figures 4a, 4b, 5a, and 5b for the locations of the AUM Site features. Note that the scale differs between Figures 4a-4b and Figures 5a-5b. The UDC No. 1 claim is not included in Figures 4a, 4b, 5a, or 5b because no mine features were found at that location.

2.1 MINE SHAFTS, ADITS, AND DECLINES

Nine adits were found at the AUM Site. The first eight adits were found on the Blackhawk/Bunney claims, and the ninth adit was found on the Red Bluff No. 8 claim. Adit-1, Adit-2, and Adit-3 are small holes in the wall of Pit-2 (see Photos 9-11 in Appendix A). Adit-4 is accessed through a vertical entrance at the north end of Pit-2. Adit-5, Adit-6, Adit-7, and Adit-8 are located in the walls of Pit-3. Adit-5 has a timbered entrance and two passageways (see Photos 20 and 21 in Appendix A). Adit-6 parallels the axis of an anticline in the Todilto Formation (see Photos 22 and 23 in Appendix A). Adit-7 is partially infilled with sand (see Photo 26 in Appendix A). Adit-8 also parallels the axis of an anticline in the Todilto Formation (see Photos 30 and 31 in Appendix A). Adit-9 is located in the southwestern end of Pit-16 and is almost completely filled with mud (see Photo 77 in Appendix A). Although this adit appears to run underneath the fence between Section 4 and Section 9, there is no corresponding entrance in the pit immediately to the south on the Section 9 claims. The highest gamma ray readings at the entrance to these adits was 1000 $\mu\text{R/hr}$ at 0 ft above ground at radiation survey point Rad-11, associated with Adit-6.

2.2 MINING AND EXPLORATION PITS AND OPEN CUTS

A total of three open cuts and twenty pits were found at the AUM Site. All three open cuts were located on the western portion of the Blackhawk/Bunney claims. They consist of shallow scrapings cut into the Todilto Formation limestones near the edge of the mesa. The maximum gamma ray reading in these cuts was 220 $\mu\text{R/hr}$ at 0 ft above ground measured at radiation survey point Rad-23 in CutPly-3. See Photo 46 in Appendix A for an example of these cuts.

Eight pits were located in the Blackhawk/Bunney claims. Two of the three pits on the eastern end of the claims (Pit-2 and Pit-3) contained adits. Pit-3 also had a mining structure (StrucPly-1) in the bottom (see Photo 23 in Appendix A). The three eastern pits (Pit-1, Pit-2, and Pit-3) tend to be narrow (15-30 ft wide), with several arms (see Photo 32 in Appendix A). The maximum gamma radiation measured in these pits was 2800 $\mu\text{R/hr}$ at 0 ft above ground at radiation survey

point Rad-14 (see Photo 29 in Appendix A). The five western pits in the Blackhawk/Bunney claims of the AUM Site tend to be linear. No adits, structures, or other mine features were found within these pits. The highest gamma radiation measured in these pits was 2400 $\mu\text{R/hr}$ at 0 ft above ground at radiation survey point Rad-21 in Pit-5. Another reading of 1300 $\mu\text{R/hr}$ at 0 ft above ground was taken at radiation survey point Rad-17 in Pit-4. Pit-6, Pit-7, and Pit-8 had gamma radiation levels below 1000 $\mu\text{R/hr}$ at 0 ft above ground. See Photo 44 in Appendix A for an example of these pits.

The Red Bluff No. 7 claim contains four pits: Pit-9, Pit-10, Pit-11, and Pit-12. These pits are similar to the pits in the western section of Blackhawk/Bunney, but they are slightly larger. Out of the four, only Pit-10 has a gamma radiation count above 1000 $\mu\text{R/hr}$ at 0 ft above ground. See photo 59 in Appendix A for an example of these pits.

The Red Bluff No. 8 claim has three relatively small pits (Pit-13, Pit-14, and Pit-15) and one very large pit (Pit-16; approximately 0.25 miles long). Out of the three small pits, only Pit-14 had a gamma radiation level above 1000 $\mu\text{R/hr}$ at 0 ft above ground. See Photo 73 for an example of these pits. Pit-16 covers most of the southern portion of Red Bluff No. 8 and contains the highest gamma radiation levels measured at the AUM Site. This measurement (radiation survey point Rad-50) exceeded the maximum scale of the scintillometer at above 5000 $\mu\text{R/hr}$ at 0 ft above ground (see Photo 84 in Appendix A). A small, infilled adit (Adit-9) is located in the eastern end of Pit-16. See Photo 78 in Appendix A for a view of Pit-16.

The four pits located in the Red Bluff No. 10 claim had radiation levels similar to or lower than background. These pits are linear scrapings in the aeolian overburden, and no Todilto Formation is exposed. See Photo 90 for an example of these pits.

No pits were found in the UDC No. 1 claim.

2.3 WASTE AND ORE PILES AND DISTURBANCES

Eighteen piles were found at the AUM Site. Six piles were found on the Blackhawk/Bunney claims, seven piles were found on the Red Bluff No. 7 claim, four piles were found on the Red Bluff No. 8 claim, and one pile was found on the Red Bluff No. 10 claim. No piles were found on the UDC No. 1 claim.

Piles on the AUM Site consisted of overburden, waste rock, or a combination of the two. Overburden piles tended to be larger, with shallower slopes (see Photos 33 and 87 in Appendix A for examples). These piles also tend to have less gamma radiation, though individual pieces of waste rock in the overburden can have elevated radiation levels. Waste rock piles tended to be smaller, steeper, and less well vegetated than overburden piles (see Photo 53 in Appendix A for an example). These piles also tended to have higher gamma radiation readings than overburden piles. Some waste rock piles spill over the mesa edge into drainages below (see Photo 62 in Appendix A for an example). The highest gamma radiation measurement on a pile recorded 1200 $\mu\text{R/hr}$ at 0 ft above ground at radiation survey point Rad-47 on PilePly-16.

2.4 MINING RELATED BUILDINGS AND FOUNDATIONS

Two structures were found onsite. StrucPly-1 is a wooden structure located inside Pit-3 on the Blackhawk/Bunney claims (see Photos 24, 25, and 28 in Appendix A). StrucPly-2 is a wooden structure sunk into the ground on the Red Bluff No. 7 claim (see Photo 68 in Appendix A).

2.5 OTHER MINE FEATURES

Three barbed wire fences (Fenc-1, Fenc-2, and Fenc-3) were located on the AUM Site. A vent hole (MiscPt-1) was found on the Blackhawk/Bunney claims (see Photo 16 in Appendix A). This vent hole may have provided ventilation to the underground workings associated with nearby adits. A pile of wooden beams and metal (Equip-1) was found near Pit-3 on the Blackhawk/Bunney claims (see Photo 18 and 19 in Appendix A).

2.6 BOREHOLES

No boreholes were found that dated back to the period of mining activity at the AUM Site.

2.7 RECLAMATION ACTIVITIES

No apparent reclamation activities have taken place at the AUM Site.

3.0 ARCHEOLOGICAL SITES

No apparent archeological sites were identified at or near this AUM Site.

4.0 SITE GAMMA RADIATION READINGS

One background gamma radiation reading was taken near the AUM Site, recording 26 $\mu\text{R/hr}$ at 0 ft above ground and 30 $\mu\text{R/hr}$ at 4 ft above ground. Please see Table 2 for all of the gamma radiation readings taken at the AUM Site and Figures 4a, 4b, 5a, and 5b for the locations of the radiation readings.

The maximum gamma radiation reading for the AUM Site was over 5000 $\mu\text{R/hr}$ at 0 ft above ground at radiation survey point Rad-50 (see Photo 7 and 8 in Appendix A) on the Red Bluff No. 8 claim. This reading was taken on mineralization on the walls of Pit-16 (see Photo 84). Other notable radiation readings were taken at radiation survey point Rad-33 (2000 $\mu\text{R/hr}$ at 0 ft above ground) in Pit-10 on the Red Bluff No. 7 claim and radiation survey point Rad-14 (2800 $\mu\text{R/hr}$ at 0 ft above ground) in Pit-3 on the Blackhawk/Bunney claims.

5.0 CURRENT LAND USES

5.1 HUMAN ACTIVITY AND RECREATIONAL SITE USE

Barbed wire fences and cow prints suggest the area is active ranchland. Evidence of present-day mineral exploration efforts (sample bags, water pipes, etc) was found onsite.

5.2 NEARBY RESIDENTIAL, COMMERCIAL AND INDUSTRIAL STRUCTURES

No structures were sighted within a mile of the AUM Site.

5.3 NEARBY DOMESTIC WELLS

One domestic well (B-01340) is located about 0.9 miles south of the AUM Site. This well is 300 ft deep, but depth to water and installment date are not known. A non-domestic well (B-01341) is located about 0.6 miles south of the Site (NMOSE, 2008).

5.4 EVIDENCE OF GRAZING OR AGRICULTURE

Barbed wire fences and cow prints indicate that the AUM Site is active ranchland.

5.5 EVIDENCE OF WILDLIFE

Scrub jays, crows, cottontails, and jackrabbits were observed onsite. Deer, rabbit, and rodent scat were found and coyote tracks were identified on the AUM Site.

6.0 VEGETATION

The AUM Site is located in the Coniferous and Mixed Woodland vegetation type and borders the Desert Grassland (Ecotone). Woody species at the site include Utah juniper, pinyon pine, fourwing saltbush and rubber rabbitbush. Snakeweed, narrowleaf yucca, and common sagewort were also present. Scapose bitterweed was present at the AUM Site along with grama grass, dropseed, and Indian ricegrass. Cryptogamic crust was present in areas. No noxious weeds were observed.

7.0 POTENTIAL OFFSITE IMPACTS

7.1 EROSION

No evidence of erosion was observed onsite.

7.2 ENVIRONMENTAL IMPACTS

There is no evidence of soil staining from chemicals potentially brought to the AUM Site.

APPENDIX A

PHOTO LOG

Note: Gaps in the numbering sequence of the photos is the result of removing photos not suitable for the report. A full set of photos is provided in the electronic deliverable.

Photo 1-Site photo, Pit-1 (Blackhawk/Bunney claims) in background, looking north.

Photo 2-Looking south at Pit-1 (Blackhawk/Bunney claims).

Photo 3-Looking northeast at the southeastern arm of Pit-2 (Blackhawk/Bunney claims).

Photo 4-Looking northeast at the northern arm of Pit-2 (Blackhawk/Bunney claims).

Photo 5-Looking west at western arm of Pit-2 (Blackhawk/Bunney claims).

Photo 6-Looking south at southeastern arm of Pit-2 (Blackhawk/Bunney claims).

Photo 7-Looking west at the junction of the two arms of Pit-2 (Blackhawk/Bunney claims).

Photo 8-Yellow mineralization at radiation survey point Rad-5 (1800 μ R/hr at 0 meters; Blackhawk/Bunney claims).

Photo 9-Looking southeast into Adit-1 (Blackhawk/Bunney claims).

Photo 10-Looking east into Adit-2 (Blackhawk/Bunney claims).

Photo 11-Looking west into Adit-3 (Blackhawk/Bunney claims).

Photo 12-Looking down and northward into Adit-4 (Blackhawk/Bunney claims).

Photo 13-Closeup of Adit-4 (Blackhawk/Bunney claims). No scale is provided because the entrance to the adit is inaccessible.

Photo 14-Looking down into the entrance of Adit-4 (Blackhawk/Bunney claims).

Photo 15-Looking south at a vent pipe (MiscPt-1; Blackhawk/Bunney claims).

Photo 16-Looking north at the northern arm of Pit-3 (Blackhawk/Bunney claims).

Photo 17-Looking northwest into Pit-3 (Blackhawk/Bunney claims).

Photo 18-Looking west at scattered lumber and metal (Equip-1; Blackhawk/Bunney claims).

Photo 19-Closeup of Equip-1 (Blackhawk/Bunney claims).

Photo 20-Looking south into Adit-5 (Blackhawk/Bunney claims).

Photo 21-Looking south at Adit-5 (Blackhawk/Bunney claims).

Photo 22-Looking north at entrance of Adit-6 (Blackhawk/Bunney claims).

Photo 23-Looking northwest into Adit-6 (Blackhawk/Bunney claims).

Photo 24-Looking west at old mine structure (StrucPly-1; Blackhawk/Bunney claims).

Photo 25-Looking east at StrucPly-1 (Blackhawk/Bunney claims).

Photo 26-Looking east into Adit-7 (Blackhawk/Bunney claims). The adit appears half full of sand eroded from the walls of Pit-3.

Photo 27-Looking north at the northern arm of Pit-3 (Blackhawk/Bunney claims).

Photo 28-Looking west at western/southwestern arm of Pit-3 at mining structure StrucPly-1 (Blackhawk/Bunney claims).

Photo 29-Radiation survey point Rad-14 (2800 μ R/hr at 0 meters; Blackhawk/Bunney Claims).

Photo 30-Looking south at Adit-8 (Blackhawk/Bunney claims).

Photo 31-View into interior of Adit-8 (Blackhawk/Bunney claims).

Photo 32-Looking south at Pit-3 from above (Blackhawk/Bunney claims).

Photo 33-Looking southeast at PilePly-1 (Blackhawk/Bunney claims).

Photo 34-Looking northeast at PilePly-1 (Blackhawk/Bunney claims).

Photo 35-Looking east at Pit-2 (Blackhawk/Bunney claims).

Photo 36-Looking northeast at Pit-2 (Blackhawk/Bunney claims).

Photo 37-Looking southwest at Pit-4 (Blackhawk/Bunney claims).

Photo 38-Looking northeast at Pit-4 (Blackhawk/Bunney claims).

Photo 39-Looking north at CutPly-1 (Blackhawk/Bunney claims).

Photo 40-Looking southwest at CutPly-2 (Blackhawk/Bunney claims).

Photo 41-Looking north at PilePly-4 (Blackhawk/Bunney claims).

Photo 42-Looking east/southeast at the Gay Eagle claims. Note waste piles spilling down slope into drainage.

Photo 43-Looking southwest at Red Bluff No. 7 claim.

Photo 44-Looking northwest at Pit-5 (Blackhawk/Bunney claims).

Photo 45-Looking north at PilePly-3 (Blackhawk/Bunney claims).

Photo 46-Looking northeast at CutPly-3 (Blackhawk/Bunney claims).

Photo 47-Looking northwest at PilePly-4 (Blackhawk/Bunney claims).

Photo 48-Looking east at Pit-6 (Blackhawk/Bunney claims).

Photo 49-Looking north at Pit-7 (Blackhawk/Bunney claims).

Photo 50-Looking west at PilePly-5 (Blackhawk/Bunney claims).

Photo 51-Looking southeast at Pit-8 (Blackhawk/Bunney claims).

Photo 52-Looking northwest at Pit-8 (Blackhawk/Bunney claims).

Photo 53-Looking north at PilePly-6 (Blackhawk/Bunney claims).

Photo 54-Looking south at PilePly-7 (Red Bluff No. 7 claim).

Photo 55-Looking northwest at AUM Site.

Photo 56-Looking northwest at Pit-9 (Red Bluff No. 7 claim).

Photo 57-Looking northwest at lower part of Pit-9 (Red Bluff No. 7 claim).

Photo 58-Looking southwest at rock face in Pit-9 (Red Bluff No. 7 claim).

Photo 59-Looking south at Pit-10 (Red Bluff No. 7 claim).

Photo 60-Looking west at PilePly-8 (Red Bluff No. 7 claim).

Photo 61-Looking west at PilePly-9 (Red Bluff No. 7 claim).

Photo 62-Looking northwest off the slope of the mesa. Debris from PilePly-9 spreads down the slope in the foreground.

Photo 63-Looking south at Pit-11 (Red Bluff No. 7 claim).

Photo 64-Looking west at PilePly-10 (Red Bluff No. 7 claim).

Photo 65-Looking west at PilePly-11 (Red Bluff No. 7 claim).

Photo 66-Looking southwest at Pit-12 (Red Bluff No. 7 claim).

Photo 67-Looking southeast at PilePly-12 (Red Bluff No. 7 claim).

Photo 68-A wooden structure sunk into the ground (StrucPly-2; Red Bluff No. 7 claim).

Photo 69-Lid near StrucPly-2 (Red Bluff No. 7 claim).

Photo 70-Looking west at PilePly-13 (Red Bluff No. 7 claim).

Photo 71-Looking west at PilePly-14 (Red Bluff No. 8 claim).

Photo 72-Looking north at Pit-13 (Red Bluff No. 8 claim).

Photo 73-Looking south at Pit-14 (Red Bluff No. 8 claim).

Photo 74-Looking northeast at PilePly-15 (Red Bluff No. 8 claim).

Photo 75-Looking southeast at Pit-15 (Red Bluff No. 8 claim).

Photo 76-Looking west at PilePly-16 (Red Bluff No. 8 claim).

Photo 77-Looking south at Adit-9 (Red Bluff No. 8 claim).

Photo 78-Looking east at the western end of Pit-16 (Red Bluff No. 8 claim). This photo shows the same location as Photo (16) in Anderson (1980), but with a different aspect.

Photo 79-Looking south at the wall of Pit-16 (Red Bluff No. 8 claim).

Photo 80-Looking east/northeast at Pit-16 (Red Bluff No. 8 claim).

Photo 81-Looking east down Pit-16 (Red Bluff No. 8 claim).

Photo 82-Looking east down Pit-16 (Red Bluff No. 8 claim).

Photo 83-Looking north at wall of Pit-16 (Red Bluff No. 8 claim).

Photo 84-Radiation survey point Rad-50 in Pit-16 (over 5000 μ R/hour at 0 meters; Red Bluff No. 8 claim).

Photo 85-Looking east down Pit-16 (Red Bluff No. 8 claim).

Photo 86-Looking north at eastern end of Pit-16 (Red Bluff No. 8 claim).

Photo 87-Looking east at PilePly-17 (Red Bluff No. 8 claim).

Photo 88-Looking southeast at PilePly-17 (Red Bluff No. 8 claim).

APPENDIX B

FIELD NOTES

4/7/10 AUM Abandoned Uranium Mines

138

Site Name: NM0074; Blackhawk Bunny,
Red Bluffs Nos. 7, 8, 10 and UDC-1

Objective: Site Assessments

Personnel: Annelia Tinklenberg
Danny Bowman

Equipment: Rental truck, Trimble Geo XM
(SN: 4948447271, 2008 Series), Ludlum 192
(SN: 234149), FujiFilm digital camera (No. 80839493),
backup Garmin GPS, cell phone amplifier,
field laptop.

1130 A+ AUM Site - Blackhawk Bunny

Photo 1 - looking north at site name and Pit 1

Pit 1 - 15' deep, 150' long, 40' wide "L" shaped

Rad 1 - Pit 1; 0m - 350 μ R/h; 1m - 150 μ R/h.

Photo 2 - looking south at Pit 1

Rad 2 - Pit 1; 0m - 2000 μ R/h; 1m - 110 μ R/h

Pit 2 - 20' deep, 50' wide, "800' long" "L" shaped

Photo 3 - looking northeast at southeastern arm

Photo 4 - looking northeast at northern arm

Photo 5 - looking west at ~~at~~ ^{AUM} south western arm from
inside Pit 2

Photo 6 - looking south at southeastern arm from
inside Pit 2

Rad 3 - Pit 2, southeastern arm; Om - 350 uR/h;
Im - 200 uR/h

Photo 7 - looking west toward junction of arms in Pit 2

Rad 4 - Pit 2, junction; Om - 800 uR/h; Im - 140 uR/h

Rad 5 - Pit 2, yellow mineralization
Om - 1800 uR/h; Im - 420 uR/h

Photo 8 - Rad 5, yellow mineralization

Adit 1 - northern arm of Pit 2; 1' high, 3' wide, 10' long

Photo 9 - looking southeast into Adit 1

Rad 6 - Adit 1; Om - 230 uR/h; Im - 150 uR/h

Adit 2 - northern arm of Pit 2; 2' high, 2' wide, 6' long

Photo 10 - looking east into Adit 2

Rad 7 - Adit 2; Om - 170 uR/h; Im - 150 uR/h

Wildlife - Adit 1 and 2 have packrat scat

Adit 3 - northern arm of Pit 2; 3' high, 1' wide, 6' long

Photo 11 - looking west into Adit 3

Rad 8 - Adit 3; Om - 340 uR/h; Im - 110 uR/h

Adit 4 - northern end of Pit 2, very deep, depth unknown; 10' tall, 15' wide, > 30' deep

Photos 12-14 - looking north into Adit 4

Rad 9 - Adit 4 entrance; Om - 35 uR/h; Im - 38 uR/h

Misc pit venthole, metal pipe; 2' tall, 6" diameter

Photo 15 - misc pit looking south

Pit 3 - 30' deep, 70' wide, ~800' long

Adit connects to Adit 4 in Pit 2

Photo 16 - looking north at northern arm of Pit 3

Photo 17 - looking northwest at loadout structure in Pit 3

Equip-1 - timber and metal, and rubber hoses, at entrance on southwestern arm of Pit 3

Photo 18 - looking west at Equip-1

Photo 19 - closeup of main Equip-1

Adit 5 - southwestern arm of Pit 3; 6' tall, 8' wide, > 50' deep (unknown) timber structural support

Photo 20 - looking south into Adit 5, trends south

Photo 21 - looking south at Adit 5 entrance

Rad 10 - Adit 5 entrance; Om - 90 uR/h; Im - 90 uR/h

Adit 5 - seems to be filling in with sand

Adit 6 - western edge of Pit 3, trends north ^{alt} then turns northwest; 4' high, 8' wide, > 40' deep

Photo 22 - looking north at Adit 6 entrance

Photo 23 - looking northwest into Adit 6

Rad 11 - Adit 6; Om - 1000 uR/h; Im - 490 uR/h

Adit 6 - seems to be filling in with sand; wooden structural supports

struct Ply 1 - 4' high, 10' x 10'; in Pit 5

Photo 24 - looking west at struct Ply 1

Photo 25 - looking east at struct Ply 1

Rad 12 - Pit ³~~5~~ ALT - 0m - 1500 uR/h; 1m - 300 uR/h

Collecting vegetation samples for Grants Ridge Sites

Photos GR 1 - 16 - Vegetation

1600 - Leaving site - Completed Blackhawk Bunny

Soils: Tan to red sandy, rocky

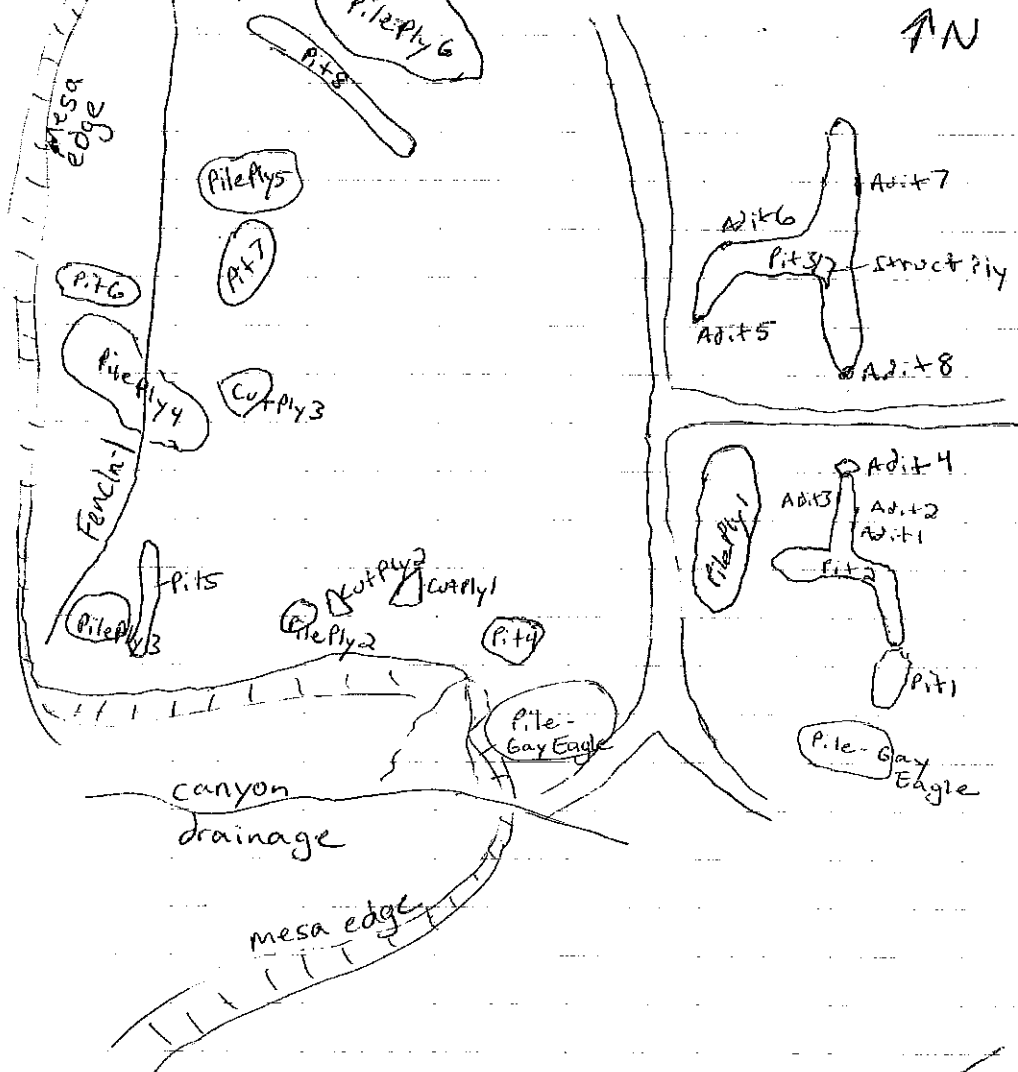

Rocks: Red Entrada sandstone, grey Todilto limestone

Human Activity: Grazing; fences, cow prints

Past mining. Active/present prospecting; truck tracks, stakes, bags of cement

Wildlife: Scrub jays, crows, rabbits droppings, coyote tracks, deer scat, packrat droppings

ALT

830 At site to continue NM0074, completed Blackhawk Bunny on 4/2/10 and starting on Red Bluff No. 7.
